

Moving Cylinders Around

Use cylinder trolley to move gas cylinders over a long distance

Roll one cylinder at a time for short distance only

Never carry the cylinder on the shoulder or lift it to move or roll 2 cylinders at a time

Never try to "catch" a falling cylinder

Move cylinders in secured manner in pallets using Fork Lift Trucks

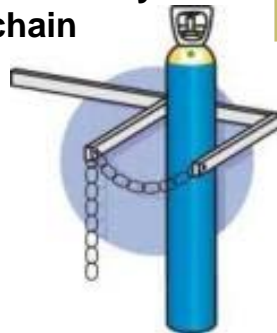

Securing Cylinders

Never allow free-standing cylinders at the site. Must be placed in groups (nested) or in a wall support structure and restrained by a strap or chain

Check valve protection is in place before moving cylinders

Ensure that cylinders remain upright and secured by using restraints- ratchet belts/ steel loops

Personal Protective Equipment

Beware of trapped hands when handling cylinders

Use safety gloves

Protect your eyes for any accidental release of gases

Beware of falling cylinder. Wear safety shoes
